Plan your route.

Before starting your journey a vehicle inspection should be carried out, i.e. the functionality of all safety devices such as locks, latches, anti-theft devices, alarm system, etc. Report any defects to your control centre immediately.

Always compare the freight documents with the cargo you are carrying and evidently check for authenticity and accordance.

Provide yourself with all necessary such as food, drinks, newspapers, etc. before you start your journey.

Always remove your keys during stopovers, close all openings such as windows, driver’s cab and cargo area and activate the alarm system.

Never leave your vehicle unattended if possible.

Use well-lit and guarded parking for breaks if possible and keep visual contact with your vehicle.

When parking, position the vehicle so that access to the cargo hold is inaccessible.

Never pick up hitchhikers and never talk to strangers about the route, destination, load, etc.

Check the vehicle and cargo after each extended stop.

Keep in regular contact with the head office and, in case of deviations from the planned route, inform the control centre immediately.

Never leave the trailer without appropriate security such as drawbar, pin or trailer lock, TSO-Slide or similar.

We wish you a good and safe journey.
